

According to the Internet's Google Map updated on 2nd March 2011,

Greg Lehey at number 47 Kleins Road, Dereel (near intersection of Dereel / Rokewood Junction Road) is a proposed site for a microwave radiation tower.

Greg would benefit financially from this action through a lease on his land to the Telco while the community would suffer.

He appears to be using Scott Weston as his puppet to do his dirty work by telling lies to the public to gain support for a tower on Greg's property.

There is already a mammoth sized lattice structure radiation tower of 60 meters high with antennas on top of that has been passed by the Golden Plains Shire in September 2010. This will be erected at the corner of Dark and Reservoirs Roads, between Corindhap and Rokewood. This new tower will network with both the existing towers at Smythesdale and Buninyong meaning microwaves are pulsed from one to another. It will cover a radius of 30kms including Shelford. The electrical power transformer upgrade to that site has now been completed so the tower should be constructed soon.

The Smythesdale tower situated at Watson's Hill is about 16 to 18 kms from Dereel. Mobile phone reception is accessed from it through north-western and central-western areas of Dereel. The CFA Shed and Hall get coverage from both this Smythesdale tower and the Buninyong tower which is about 25kms away. These towers certainly do **NOT** require line of sight to operate as the pulsed microwaves are powerful enough to penetrate most obstacles in their path. Microwaves received in mobile phones are of thousands of times **LESS** than the output from a tower. Towers are far more detrimental to your health than phones.

Website www.savedereel.com has now been updated for your reference with over 20 pages of information from around the world collected August 2010 to March 2011. If you do not have the internet connected, you can go to the library and use their internet service free of charge. If you are unable to access websites, then call Wendy or Stewart on 5346 1114 and we can give you a copy.

The savedereel.com website has hundreds of pages of very credible information and studies, peer reviewed, and articles from the public in their struggle against this problem. These are from world renowned scientists, epidemiologists, neurologists, oncologists, professors, and Australia's two top neurosurgeons operating on brain tumours. It also includes a telecommunications expert, doctors, nurses, politicians, biologists, physics lecturers, electrical engineers, librarians, school councils, university lecturers, and the public who have suffered. There are books written, videos to view, files to read and people you can speak with.

The proof is all out there with more problems surfacing every day, but you won't know until you take the time to read it for yourself. This is not the time to sit back and put your head in the sand. The facts on microwave radiation are now out there for everyone to see. Trying to ignore the problem will not make it go away – we wish it would be that easy!

For Telecommunications Resource Kits for Communities when people learn that a new base station / tower is proposed for construction in their neighbourhood – see:- EMR Australia P/L at www.emraustralia.com.au or phone 02 9576 1772 to get a kit.

Look in ***The Courier Newspaper*** each Saturday under '***Public Notices***' as the Telco will advertise the tower as a '***Telecommunications Facility***', with the Golden Plains Shire logo on it. They then give the public 14 days in which to lodge their written objections into The Golden Plains Shire's Planning Department, Attention to Tim Waller or Kate Jewell, PO Box 111, Bannockburn, Vic. 3331.

My reply to Scott Weston's letter - circulated into Dereel letterboxes in Feb. 2011

(If you are unaware of Scott's letter and would like to know what he wrote, phone me and I'll send you a copy.)

Scott's top highlighted section: I have not taken out or attempted to take out any litigation against the Editor of the Miner Mr Alan Marini, and I certainly do not have any special powers to control what Alan writes or publishes and when he does it. Scott Weston's assertion that I could possibly have control over Alan and force him to do this is ridiculous in the extreme.

Scott's first paragraph: As I stated in my 'Letter to the Editor' of the Miner Newspaper in February 2011, *'Scott should consider very carefully in future before giving the public false and misleading information in an attempt to gain support for a tower as this is a serious issue and could see litigation brought against him when people suffer as a result of his actions'*.

Scott seems to think it will be me rather than the people who he has lied to. They are the people who may well sue him, Greg Lehey or the radiation tower company in the future if people rely on their word and don't find out the truth until it is too late.

Scott's second paragraph is totally wrong and very mixed up. Scott has not been able to grasp or comprehend the meaning of the sentences that I wrote. I did **NOT** say David Mould was an expert. I did say he is the Victorian Distributor for the German YShield products which thousands of people are now relying on to shield them from the microwave radiation towers. These products were originally designed by the German Armed Forces to stop the infiltration and stealing of secret information.

Dr. Repacholi, formerly employed by the World Health Organisation is certainly **NOT** a person I would hold in high esteem. He was ultimately responsible for setting the extremely high exposure levels of radiation which do not protect any living things. As Scott wrote 'this expert was sacked from his job for taking bribes'.

I was not able to put anymore information into my 'letter to the editor' in The Miner Newspaper in February 2011, as Alan Marini said it was too long and he wouldn't print it. I could have easily turned his newspaper into hundreds of pages of information.

Scott's third paragraph is straight out lies. It is similar to saying 'black is white' when clearly it is not; or to say asbestos can't hurt you – it is only a bit of fibre; or smoking couldn't do that damage to you – it's only a bit of smoke – comments that most people acknowledge are wrong. Scott's letter is becoming increasingly desperate.

Scott's fourth paragraph is yet more lies and a load of garbage. I have **NEVER** 'claimed to know more than the experts in the field'. This is not a scare campaign that Scott Weston tries to promote. We simply go by the facts. There is no 'uncertainty and doubt' which are the words used by Scott. Scott and Greg are the ones putting the community in danger – certainly not by us as Scott stated. People who understand this subject of pulsed microwave radiation from digital communications towers have every right to 'fear it'.

Also, by putting your red inked rubber stamp all over our information sheets that were on the Dereel Public Notice Board saying '**CERTIFIED CRAZY**' makes you look even more stupid and is a very childish act.

The fact is, if this radiation tower goes ahead it will adversely affect all living things around it – including you, your cats, dogs, birds, live stock, pollinating bees, trees and plants, etc. which is all proven scientifically - no ifs or buts – that is a certainty.

People who are employed by governments, the telecommunications industry, also companies with government contracts, organizations who rely on or receive government funding, etc. can be controlled to keep silent or they may be sacked, lose their contracts or their funding if they speak out. Money can control!

The Proof is on the website www.savedereel.com
